Summary of Modifications to SMART in Version 12.3 (December 2010 Release)
Release Date January 14, 2011

This table summarizes the major changes for users in SMART Version 12.3.

Several modules change in the new version to provide greater functionality to the user, as summarized below.

Module Affected	Description
Recovery Care Check-up	Users may now produce a Recovery Care Report for the recovery plan.
Program Enrollment (Enrolling in Assessment Programs)	Assessment modalities are available as levels of care in SMART. When a client is enrolled in an assessment modality, the user may enter encounters for the assessment enrollment period and no admission record is required.
	If the client is subsequently admitted, users will receive a warning message when entering assessment encounters prior to the admission date, but will be allowed to save the encounters. Please check with your trainer or the IGSR Help Desk if you need more information about adding assessment levels of care (modalities).
Episode List	A column is added to the Episode List in order to display the latest program enrollment for each client episode.
Intake	The process of closing a case (on the intake screen) has been optimized to allow it to take place more quickly.

Some modules are added for future use. Training and implementation details will be provided at a later date.

Module Affected	Description
Access to Recovery functions (ATR3)	New modules are added to enable Maryland to use SMART to track ATR clients, vouchers, etc. Only a few agencies will be using these modules and ADAA will notify these agencies and arrange for training.

Some changes affect only users at the MD Department of Juvenile Services, as summarized below. These are for future use – training and implementation details will be provided at a later date.

Module Affected	Description
DJS Treatment Service Plan	Additional fields are pulled from Assist. Users can produce a PDF report for the TSP and associated screens. Sanctions and incentives added for the TSP. New fields added to the Placement/Permanency screen. Many additional features and modifications are applied to the TSP.
