

Summary of Modifications to SMART in May 2013 (14.8.1) Release
Release Date June 7, 2013

This table summarizes the major changes for users in the May 2013 SMART Release.

Several modules change in the new version to provide greater functionality to the user or to correct previous issues, as summarized below.

Module Affected	Description
Client Search	Fixes the bug that was causing "Clients with no case history" filter to return clients with open active cases when searching on client's alternate name.
Reports	Three reports under "Provider Appointments" and three reports under eCourt were removed, as these are no longer useful or up-to-date.
Alerts	Modify the trigger point for the Outcomes Alert. This alert is now based on Program Enrollment Start Date.
Admission (Treatment)	Corrected an issue where users would get a warning message about enrolling in a TEDS program when saving an Admission record that only had the required fields completed. This warning should only appear when a user tries to add a TEDS/NOMS enrollment and the admission is incomplete (meaning yellow fields are empty).
GPRA Follow-up Due	Update query to display the client in the current care coordination agency (ATR)
Encounter Delete	Allow the "Encounter Delete" function to behave independently of the Clinical Supervisor or other roles
Program Enrollment	Expand Number of rows displayed on Program Enrollment List screen
Treatment Plan	Display only active program enrollments in the Program dropdown

Module Affected	Description
Client DOB	Adds the client's date of birth to the client dropdown with the format "Last Name, First Name (DOB)" under Dispensary - Manage Inventory, Group Roster and Support Ticket.
ASAM Level of Care	Reformats the ASAM screens on Admission, Discharge, Treatment Review, TAP Assessment, and MDA Assessment to make the Level of Care fields readable.
Client Group Enrollment	Add a priority field to CGE and use to sort CGE dropdown on Release to Billing
TAP	On the Drug Alcohol Usage screen, for question 1 when the Primary, Secondary, Tertiary substance is selected, the corresponding Severity, Frequency, and Methods of use now turn dark yellow upon save when these fields are blanks.
Client Profile	Yellow Screen Saving a Collateral Contact for a New Unsaved Client is now fixed.

Some Changes Only Apply to Department of Juvenile Services and are listed below:

Module Affected	Description
Facility	Create or update facilities in WITS using messages from DJS' Assist
Staff	Create or update staff records using a message from DJS' Assist
DJS Contacts Module	Modify the Contacts Module
DJS Treatment Planning	The error message no longer appears when saving a Placement/Permanency screen.
