Summary of Modifications to SMART in Version 9.4
November 2008 – Scheduled Release Date of 1/5/09

These two tables summarize the major changes for users in SMART Version 9.4.

There are several changes in the new version to provide greater functionality to the user, summarized below.

Module Affected	Description
Intake Screen	If the user selects "Source of Referral" of DSS/TCA, SMART will require that the user also select a source of referral detail. This will assist ADAA and treatment agencies in tracking exactly where DSS/TCA referrals originate.
Drug Test Results	Drug test results which are positive will now appear in red in the drug test module.
Medications Screen	Medications records will now appear on the Client Activity List. Multiple records will be grouped on the activity list. When medication category changes, the medication type will be populated.

There are several changes which address issues in the previous versions, as detailed below.

Module Affected	Description
Client Search	When searching for a client by "Case Assigned To," SMART has been searching instead for the staff member in the "Treatment Staff" field. Similarly, searching for a "Treatment Staff" looked for that staff in the "Case Assigned To" field on the intake screen. This release corrects this discrepancy.
Client Progress Report	This release corrects the headings for Treatment Attendance on the Client Progress Report.
MCASP Risk Assessment (formerly known as DJS Prescreen)	When this assessment is completed in SMART, it sends information over to DJS' system.
MCASP Risk Assessment	"Age of first offense" is now a drop-down list.
Intake Screen	Consented data on intake screens is not sharing in this release. A new point release will be issued shortly which will correct this issue.
