

Summary of Modifications to SMART in Version 9.5
January 09 Release – Release Date 2/3/09

These two tables summarize the major changes for users in SMART Version 9.5.

There are several changes in the new version to provide greater functionality to the user, summarized below.

Module Affected	Description
MCASP Risk Assessment	The Risk Assessment, used by DJS, has been modified to align more closely with the functionality described in SMART training sessions.
Continuing Care	A version of the Continuing Care Plan is now implemented in SMART and will be introduced to SMART users in the near future.

There are several changes which address issues in the previous versions, as detailed below.

Module Affected	Description
Intake Screen	If the user selects “Source of Referral” of DSS/TCA, SMART requires that the user also select a source of referral detail, but sometimes these detail choices did not initially appear. This release corrects that omission.
Drug Test Results	Users can now delete drug test results without encountering an error screen.
MCASP Risk Assessment	Users will not be able to delete this assessment or add this assessment in SMART. Users will continue to do those changes in ASSIST.
Intake Screen	Consented data on intake screens now shares between agencies with valid consents.
